

Disinfectant liquid ActiwWater 20ltr (7039057)

TECHNICAL SPECIFICATIONS

Content

20 ltr

PRODUCT INFORMATION

ActiWater is a disinfectant formula with a strong biocidal effect and dispersion function, effectively eliminating micro-organisms and biofilm in water and plumbing. Thanks to its neutrality towards steel, the agent does not cause corrosion, making it ideal for continuous disinfection of drinking water and shock disinfection of installations. • Strong biocidal effect: Effectively treats pathogens, including Legionella and Pseudomonas. • Corrosion-free: Safe for steel, without the unpleasant smell of chlorine. • Without ADR: Easy storage and transportation. • Higher efficiency: 80-120 times more effective than sodium hypochlorite. • Biofilm removal: Penetrates and eliminates biofilm. • Safe: Non-irritating to skin and mucous tissues. Application: • Shock disinfection: Ideal for pipelines, tanks, water filters and water supply systems, especially after refurbishment or replacement of media. • Legionella removal: Effectively treats Legionella bacteria in water, air-conditioning, and swimming pool systems. • Industrial disinfection: Ideal for use in food industry, washing products and equipment, ensuring a high level of microbiological hygiene.
